

Overview

The classic Peerless design is now available in five different color plated finishes. The color finish helps to prevent equipment loss by allowing individuals, agencies or departments to more easily identify and track property. Color can also be used to enable or reinforce a classification system such as threat level, medical condition, jurisdiction and more. The color-coding is applied using a process called Electrolytic Polyurethane Plating (EPP). EPP fully coats restraints inside and out without interfering with the lock mechanism or jaw swing-through. The durable EPP finish is resistant to shipping and scratching. The rust resistant EPP finish exceeds the National Institute of Justice's 12-hour salt spray testing standard. Two keys supplied. Made in USA.

Attributes

Color	Blue, Orange, Pink, Red, Yellow
Option	Oversized, Standard
Product Unit Type	Each
