

Overview

The **Pro-Strait Detainee Safety Chair** provides law enforcement and medical personnel with an option to physically restrain individuals who may be impaired, violent, or otherwise uncontrollable such that they pose a risk to themselves or others. It features 8 points of restraint, which provide varying degrees of restraint to accommodate numerous situations (included in the Safety Chair with Restraints is a set of 2 wrist and 2 ankle soft restraints). The **Pro-Strait Detainee Safety Chair** is commonly used in prisons, jails, correctional facilities, police and sheriff departments, and psychiatric hospitals.

The Pro-Strait Detainee Safety Chair is constructed with durable materials, including a steel base with retractable casters, a molded thermoplastic polyolefin seat, steel buckles, woven nylon restraint straps, and tamper-resistant buckles. The Pro-Strait Detainee Safety Chair is intended to withstand force exerted by an uncooperative detainee when used appropriately.

With a heavy base and low center of gravity, the Pro-Strait Detainee Safety Chair is intended to be stable. A one-step lifting mechanism is located at the rear of the chair underneath the seat, which releases casters with 360° rotation to facilitate movement of the chair. The casters can support a total weight of over 500 lbs.

The Pro-Strait Detainee Safety Chair features a removable back pad in the seat that, when removed, reveals a slot that can accommodate most handcuffed detainees' hands when the detainee is in a seated position.

The Pro-Strait Detainee Safety Chair provides trained law enforcement and medical personnel with multiple options to select the appropriate level of restraint for the individual and the circumstances based on their professional judgment. For example, personnel can select a combination of waist and shoulder restraints for the torso; seat a detainee with or without separate handcuffs; customize the range of hand motion for uncuffed detainees using restraints with rear cam buckle adjustments; and tailor the configuration of restraints and straps around the detainee's ankles to eliminate all motion or allow some motion.

FEATURES & BENEFITS:

- **Delivers completely assembled and ready for use**
- Chair dimensions: 37.5"L x 25"W x 32"H (**fits through a standard 30" wide door**)
- Chair weighs approximately 150 lbs.
- Variable restraint levels (full range of motion, partial range of motion, no range of motion) are available using rear cam buckle adjustments on wrists and ankles
- Heavy, solid steel frame with a low center of gravity for stability
- One-step lifting mechanism that raises the chair and enables the use of casters with 360° rotation to facilitate movement while maintaining stability
- Durable and easy-to-clean molded thermoplastic polyolefin seat with removable back pad to accommodate most handcuffed detainees
- Secure belt restraint system with optional torso restraints and tamper-resistant buckles
- Buckle release can be achieved with the use of a universal handcuff key or other small, cylindrical object inserted into a hole on the face of the buckle
