

Overview

Smith & Wesson hinged handcuffs are constructed of nickel-plated carbon steel. Satin nickel plating provides corrosion resistance and makes the handcuffs appear dull or cloudy to prevent glare in tactical situations where cover is required. The hinged design safely restricts movement providing more security for officers. Smith & Wesson is a double-locking handcuff that utilizes the slot lock double locking mechanism. Simply insert the back of your handcuff key into the slot and pull towards the keyhole to double lock these handcuffs. They can also be double-locked from both sides. These are sold with 2 Smith & Wesson handcuff keys, instructions and a lifetime warranty.
